

Are you at higher risk for glaucoma?

Glaucoma affects African Americans differently.

It strikes us when we're younger and is a leading cause of blindness. Glaucoma also runs in families. Because glaucoma has no warning signs in its early stages, it's important to get a dilated eye exam every one to two years so it can be detected and treated early. Start a conversation about glaucoma. It could save your sight or the sight of someone you love.

It's Glaucoma Awareness Month.
